Undurraga Terroir Hunter Sauvignon Blanc 2015

The 2015 TH Sauvignon Blanc Leyda is produced with grapes from limestone soils, a rarity, as most of the soils are granite-based. It was cold fermented in stainless steel vats with selected yeasts and kept in contact with the lees for six months before bottling. The clone used here (with more acidity, less topical and slow ripening) from the limestone-rich soils is diminished by the imprint from the soil. There are notes of gooseberries and spices, and the palate shows the chalky texture from the soils. This is young but very drinkable. I also tasted the 2007, the first vintage bottled, now ten years after the harvest, and the wine has developed complexity and evolved slowly, so there's no reason why the current wines should not age at least ten years. 25,345 bottles produced.
